                                                                                                                                                                                                                           diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                             present invention.

                                                                                                                                                                                                                                                                                                                                                                                                            cancer-associated nucleic acid molecules (N) and proteins (P), the proteins are collectively known as colon cancer antigens. 'cancer antigens have cytostatic activity and can be used in gen therapy and vaccine production. N and P may be used in the predictions and treatment of diseases associated with inappropriations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1801

                                                                                                                                                                                                                                                                                                                                                                                             The mammalian CXC chemokine receptor 3 (CXCR3) gene encodes a protein which can selectively bind one or more chemokines and can mediate cellular signalling and/or a cellular response in response. Inhibitors and promoters of mammalian CXCR3 can be detected and identified using host cells expressing CXCR3. CXCR3 inhibitors can be used for treatment of inflammatory diseases which are T cell mediated. CXCR3 promoters are useful for antitumour or antiviral therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding CXC chemokine receptor which, are useful for treatment of i anti-viral therapy

CC The invention relates to constitutively active, non-endogenous versions CC of endogenous human orphan G protein coupled receptors (GPCRs, AAY90643-CC AAY90677 and AAY90663-Y90687), and to DNA encoding them (AAA30709-A30743 CC and AAA30775-A30779). The mutant proteins of the invention contain a CC (IC3) and transmembrane domain 6 (TM6) A non-endogenous amino acid, X, CC is substituted for an endogenous residue in IC3 at a position 16 amino CC acids N terminal of an endogenous proline in TM6 to form a sequence CC x(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg CC or Ala, and is preferably Lys. When the endogenous residue at this CC The 15 amino acid stretch between the substituted amino acid and the Pro CC may be endogenous. Non-endogenous, or a mixture of endogenous and CC identifying antagonists, agonists and partial agonists for use as CC pharmaceutical agents. The mutant proteins are also useful in research CC settings for elucidating the roles of the receptors in normal and codiscased conditions. Antagonists for a particular GPCR are useful for CC treating diseases and disorders associated with that receptor. Because CC the novel mutant GPCRs are constitutively active, they can be used CC directly for screening of compounds without the need for endogenous CC subjected to site-directed mutagenesis CDM, encoding a human wild-type constitution of the invention. This was cloned and CC subjected to site-directed mutagenesis CDM) to generate DNA encoding CC the corresponding mutant of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chalmers
                             present sequence represents cDNA encoding a human wild-type an exemplification of the invention. This was cloned and site-directed mutagenesis (SDM) to generate DNA encoding nding mutant of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    98US-0170496

                                                                                                                           The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-CC AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743 CC and AAA30775-A30779). The mutant proteins of the invention contain a cc mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, CC is substituted for an endogenous residue in IC3 at a position 16 anino CC acids N-terminal of an endogenous proline in TM6 to form a sequence CC X-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg CC or Ala, and is preferably Lys. When the endogenous residue at this CC position is Lys, this residue is replaced by His, Arg or preferably Ala. CC The 15 amino acid stretch between the substituted amino acid and the Pro CC may be endogenous, non-endogenous, or a mixture of endogenous and CC mon-endogenous residues. The constitutively active GPCRs are useful for CC disentifying antagonists, agonists and partial agonists for use as CC pharmaceutical agents. The mutant proteins are also useful in research CC settings for elucidating the roles of the receptors in normal and CC treating diseases and disorders associated with that receptor. Because of the novel mutant GPCR are useful for the novel mutant GPCR are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1091
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1404
                                            the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAA30709- AAA30743 and AAA30775-A30779 represent encoding the mutant human GPCRs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         G protein-coupled receptor; GPCR; constitutively active; intracellular loop 3; transmembrane domain 6; drug scree

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
CC This sequence represents cDNA encoding human chemokine receptor CXCR3b, CC a splice variant of chemokine receptor CXCR3 (also referred to as CC CXCR3a). Chemokines are a family of small cytokines which bring about the CC creatitment of leukocytes during inflammation. The CXC chemokines CC mostly attract neutrophils, while the CC chemokines are less selective. All chemokine receptors are seven transmembrane G-protein coupled CC receptors and most are receptors for a number of chemokines, CXCR3a CC being a receptor for the CXC chemokines in the selective recruitment of CC expressed in activated, but not in resting T-lymphocytes, and may CC therefore play an important role in the selective recruitment of CC CXCR3b may have an altered pattern of tissue distribution and CC CXCR3b may have an altered pattern of tissue distribution and CC CXCR3b are useful for identifying ligands, especially agonists and CC CXCR3b are useful for identifying ligands, especially agonists and CC cxCR3b are identification of chemokines responsible for mediating CC inflammatory responses is of therapeutic benefit in many conditions CC such as rheumatoid arthritis, psoriasis, multiple sclerosis, atherosclerosis. CC and restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seven transmembrane; G-protein coupled; CXC; IP10; Mig; T-lymphocyte recruitment; selective; activated; T-cell; neutrophil; inflammation; tissue distribution; therapy; rheumatoid arthritis; psoriasis; multiple sclerosis; transplantation; atherosclerosis; restenosis; cytokine; delayed type hypersensitivity reaction; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B
This represents a rodent chemokine receptor HST01.1 nucleotide sequence. The invention provides novel primate and rodent chemokines and chemokines receptors. The chemokines, receptors and binding compounds (optionally cantibodies/fragments specifically binding the chemokines) are useful therapeutically to treat conditions associated with abnormal physiology or development e.g. inflammatory conditions such as asthma. Chemokines care important in immune and inflammatory responses in that they induce leukocyte migration and adhesion. They are also chemoattractants for several cells involved in inflammation and can induce other biological responses e.g. modulation of second messenger levels (e.g. Ca++), cellular morphology modification responses, phosphoinositide lipid turnover, possible antiviral responses etc. The chemokine receptors of the invention exhibit structural properties of c-protein coupled receptors (GPCR), although their ligands have not yet been identified. The chemokine and chemokine receptor polypeptides are useful to produce ligand: receptor complexes in vivo or in assay techniques. Assays may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rodent and primate chemokines and chemokine receptors - useful diagnostically and therapeutically to treat conditions associated with abnormal physiology or development e.g. inflammatory conditions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  also involve chemical antagonists which block complex production or utilise competitive binding. Binding compounds identified (agonists or antagonists) can be used to modulate the physiological responses in cells (especially neurons, macrophages or lymphocytes) to treat e.g. abnormal proliferation, regeneration, generation and atrophy. The polypeptides are also used to produce antibodies useful diagnostically, for drug screening or for polypeptide purification. The polymucleotides are useful to produce probes for detecting the polypeptides, and to isolate the polypeptides or related sequences, especially from other species. They also allow transformation of cells for polypeptide production.

Two new gene sequences were found that are clearly related to the II-8 receptor. One of these was contained in clone 8rr.9 and is predicted to encode an amino acid sequence which is 36% and 38% identical with the high and low affinity II-8 receptor sequences, respectively. See also AAQ37107.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δÃ
         chronic lung inflammation. When immobilised, these anticontrolled lung inflammation. When immobilised, these acceptor in cells and be used to detect interleukin-8 receptor B expression in cells and tissues and for affinity purification of interleukin-8 receptor B from cells. This sequence is an additional chemokine superfamily receptor which was identified by probing lamda libraries of genomic DNA from a human monocyte-like cell line (L-60) and human peripheral blood lymphocytes using a large fragment of the interleukin-8 type A receptor DNA (See AAQ99006).
                                                                                                                    to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid arthritis and particularly inflammatory bowel disease chronic lung inflammation. When immobilised, these antibodies may be a supported by the chronic lung inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rheumatoid arthritis; inflammatory bowel diseas
